

DECREASE DUST WITH US

www.petersonsdustsolutions.com

Peterson's Dust Solutions

We provide Dust Solutions for Grain

Our system provides an easy way
to apply food-grade mineral oil
to multiple types of grains.

ABOUT US

In the late 1980's, R.C. Peterson became aware that there were health hazards not being addressed when it came to handling grains. He noticed this was not only a farmer's problem but a rising problem on the commercial level as well. He decided this needed to be dealt with and he created "Agri Duster."

In the early 90's Randy Peterson started working for his father R.C. Peterson in the dust suppression and electrical industries. After R.C. Peterson's passing in 2016 Randy Peterson decided to continue with his father's vision and expand into the fertilizer market.

"It not only cut down on the dust when loading the grain on trucks and trains it also cut down on the time spent washing equipment that was covered in dust. The small amount of oil applied to the grain makes the grain a bit sticky so to say and makes the fines stick to the grain in return the fines get spread throughout the bin and don't all fall to the center. Anyone who handles grain knows exactly what I'm talking about!!!

Your boot pits are no longer full of dust creating a hazard. The benefits go on and on and Randy is very knowledgeable of his product. We highly recommend an oil system for any fertilizer and grain handling facility!"

-Cory Hinders, Osage Coop

THE BENEFITS

SAFETY

The dust reduction will significantly decrease the possibility of an explosion from grain dust. It will also reduce grain dust inhalation.

REDUCED SHRINKAGE

Oiling will keep fine particles in the final weight, reducing shrinkage.

CLEANLINESS

The reduction of dust will help keep buildings and neighborhoods cleaner, allowing a better work environment and longer equipment life.

GRAIN PILE HOT SPOTS

Distributes dust particles throughout the grain storage resulting in less hot spots in the grain pile.
